

**62-year-old businessman who underwent surgery for removal of brain tumor and subsequent stroke 2 weeks later in November 1999**

Jim Thorpe Rehab recommended that patient start therapy with the CSI System in July 2000 at his place of business allowing the patient to practice on a continuous time frame at work.

- July 5, 2000, the System was installed in patient's place of business with Jim Thorpe Rehab Therapist (Speech Language Pathologist) assigned to the patient.
- Patient has recovered much of his short-term memory and has advanced to intermediate to high levels of the cognitive exercises, including Visual-Spatial II, Memory II and Problem Solving I.
- As of October 17, patient was continuing to practice his cognitive thinking skills along with managing his computer-based business.
- December 2000 discontinued CSI System due to patient receiving chemotherapy and sustaining another stroke in mid November 2000.
- Patient continuing to work with special activities that help the patient keep mentally alert.
